

OCCER decision of 11 November 2020 on reporting infection or suspicion of infection

As the number of people infected or suspected of being infected with the coronavirus increases, OCCER will change the reporting procedure. Point 2. of the Director General's Order No 3/2020 is amended as follows:

2. All employees are required to report coronavirus infection if they or those they live with in the same household are **suspected or confirmed** to be infected. **The notification must be made if the worker has visited one of the institutes of the ÖK and came into close contact with another in the 10 days prior to the confirmation of the infection or the onset of symptoms.** The report must be submitted by e-mail to the Director of their Institute and, in addition, to the e-mail address dedicated exclusively to this issue: koronavirus@ecolres.hu . Together with the report, the notifier shall indicate which institute (institutes) of CER they have visited **and with whom they came into direct contact there** during the last **ten days**.

The above provisions will be effective from Friday, 13 November 2020, after having approved by OCCER on 11 November 2020. Employees are requested to follow possible changes in regulations at <https://ecolres.hu/en/coronavirus>.
